WPML

In order to translate with WPML, you need to first enable this within Calendarista by going to the Settings - > General page. Scroll down to the Translation plugins section and select WPML.

🖆 Plugins	MA.								
👗 Users	Google Mans API Key								
🖋 Tools	obogie maps Arrikey								
G Settings	Translation plugins	None 🕵 WPML O Polylang O Manual translations (poEdit or other)							
Q WPML		Note: Dynamic string translation such as labels and content found in custom form field, optional extras and email nc							
💼 Calendarista	Auto complete woocommerce	When checked, a successful woocommerce order status will be automatically set to complete.							
Services	order								
Places	Add backing form to								
Sales	Woocommerce Product	\checkmark When checked, the booking form is added automatically to the Woocommerce Product.							
Appointments									
Holidays	Invoice prefix	CA							
Staff									
Settings Setup Wizard	Approved appointment	Select Color							
		An approximate approximate out will have this calor							

Next go the WPML menu and select "Theme and plugin localization". Here you will need to scroll down to the plugins section and ensure "Calendarista" is checked.

Products	Strings in the plugins	All (40) Active (12) Inactive (28)

a Translation								
Menus Sync		6	Calendarista	plugin-update-checker	0	5	create PO file	
g Translation		\checkmark						
nomy translation				calendarista	0	<u>1301</u>	create PO file	
tings				default	0	11	create PO file	
pport							create r O lile	
Calendarista				<u>calenarista</u>	0	1	create PO file	

Now scroll down to find the "Scan selected plugins for strings".

You are almost done. Now to the WPML "String translation" page and select Calendarista from the list. This will produce all strings previously scanned and found in the plugin, along with any dynamic string translations registered with WPML as well. Now you may begin translation.
